### **EXECUTIVE SUMMARY**

Hamilton-Wentworth Catholic District School Board (Client) retained Pinchin Ltd. (Pinchin) to conduct an asbestos building materials reassessment at the subject building.

The objective of the reassessment was to evaluate the condition and quantity of previously reported asbestos-containing materials (ACM), and develop corrective action plans as required for the purposes of long-term management. The results of this reassessment are not intended for construction, renovation, demolition or project tendering purposes.

### **Summary of Recommendations**

The following is a summary of significant recommendations; refer to the body of the report for detailed recommendations:

- Perform a reassessment of asbestos materials on an annual basis.
- Perform a pre-construction assessment and remove all asbestos-containing materials (ACM) prior to alteration or maintenance work if ACM may be disturbed by the work.
- Follow appropriate safe work procedures when handling or disturbing asbestos.
- Sample any presumed ACM prior to alteration or maintenance work if presumed ACM may be disturbed by the work.

This Executive Summary is subject to the same standard limitations as contained in the report and must be read in conjunction with the entire report.

Asbestos Reassessment St. Michael, 135 Hester Street, Hamilton, Ontario Hamilton-Wentworth Catholic District School Board

### 1.0 INTRODUCTION AND SCOPE

Hamilton-Wentworth Catholic District School Board (Client) retained Pinchin Ltd. (Pinchin) to conduct an asbestos building materials reassessment at St. Michael, located at 135 Hester Street, Hamilton, Ontario.

The reassessment was performed by Luke Thompson, Project Technologist on June 28, 2022.

The objectives of the reassessment were to document the locations, quantities and conditions of previously identified asbestos-containing building materials and develop corrective action plans as required. This reassessment is only to be used for the purposes of long-term management and routine maintenance. The results of this reassessment are not to be used for construction, renovation, demolition or project tendering purposes.

### 1.1 Scope of Assessment

The objective of the reassessment was to evaluate the condition and quantity of previously reported asbestos-containing materials (ACM's), and develop corrective action plans as required.

Refer to the Asbestos Building Materials Reassessment Methodology report and Annex A dated 2022, Pinchin File 303992.004, for the methodology used during the reassessment.

### 2.0 BACKGROUND INFORMATION

### 2.1 Building Year of Construction and Additions

| Item                 | Details |
|----------------------|---------|
| Year of Construction | 1966    |
| Year(s) of Additions | 2005    |

### 2.2 Existing Reports

### 2.2.1 Review of Previous Reports

Pinchin previously prepared the following reports, which have been reviewed and relied upon as part of this assessment:

- Asbestos Assessment, St. Michael, 135 Hester Street, Hamilton, Ontario, August 2018, Prepared by Pinchin Ltd., Pinchin File: 224334.
- Asbestos Reassessment, St. Michael, 135 Hester Street, Hamilton, Ontario, August 2019, Prepared by Pinchin Ltd., Pinchin File: 243241.
- Asbestos Reassessment, St. Michael, 135 Hester Street, Hamilton, Ontario, June 2020, Prepared by Pinchin Ltd., Pinchin File: 272113.

Asbestos Reassessment St. Michael, 135 Hester Street, Hamilton, Ontario Hamilton-Wentworth Catholic District School Board

- Bulk Sampling Letter, Exterior Renovations, St. Michael, 135 Hester Street, Hamilton, Ontario, June 3, 2021, Prepared by Pinchin Ltd., Pinchin File: 286533.002.
- Revised Asbestos Reassessment, St. Michael, 135 Hester Street, Hamilton, Ontario, July 2021, Prepared by Pinchin Ltd., Pinchin File: 286533.001.

The following section summarizes the findings of the reassessment and provides a general description of the asbestos materials identified. For details on quantities, assessment, sample numbers, friability, condition, and locations of asbestos materials; refer to the Hazardous Materials Summary / Sample Log Report and All Data Report in Appendices III and IV, respectively.

Previous analytical sample results have been relied upon and were included in the original asbestos assessment report completed by MTE Consultants Inc. Additional samples results where collected by Pinchin have been included in Appendix I.

### 2.3 Excluded Asbestos Materials

A number of materials which might contain asbestos were not sampled during this reassessment due to limitations in scope and methodology. Where present, these materials are assumed to contain asbestos until otherwise proven by sampling and analysis. These materials are not shown on the drawings in Appendix V. Excluded materials presumed to contain asbestos include:

| Material                                                                                                 | Friability  |
|----------------------------------------------------------------------------------------------------------|-------------|
| Roofing, felts and tar                                                                                   | Non-friable |
| Concrete floor levelling compound                                                                        | Non-friable |
| Electrical components or wiring within control centers, breakers, motors or lights, insulation on wiring | Non-friable |
| Vermiculite in concrete block wall cavities                                                              | Friable     |
| Adhesives and duct mastics                                                                               | Non-friable |
| Caulking and butyl seals                                                                                 | Non-friable |
| Fibre reinforced paints and coatings                                                                     | Non-friable |
| Paper products                                                                                           | Non-friable |
| Soffit and fascia boards                                                                                 | Non-friable |
| Mechanical packing, ropes and gaskets                                                                    | Non-friable |
| Vinyl baseboards                                                                                         | Non-friable |

St. Michael, 135 Hester Street, Hamilton, Ontario Hamilton-Wentworth Catholic District School Board

| Material                                    | Friability  |
|---------------------------------------------|-------------|
| Exterior cladding                           | Non-friable |
| Fire resistant doors or metal clad finishes | Non-friable |
| Vibration dampers on HVAC equipment         | Non-friable |
| Ceramic tile thin-set                       | Non-friable |

### 2.4 Confirmed/Presumed Asbestos-Containing Materials and Confirmed Non-Asbestos Materials

This section includes materials that have been confirmed asbestos-containing by sample analysis or presumed asbestos-containing by visual identification. Refer to the drawings in Appendix V for the locations of confirmed and presumed ACMs indicated via hatching or symbols. The locations of samples from the historical assessments, performed by Pinchin, have been included on the drawings.

| Material and Application                                                                    | Asbestos<br>Type/Friability | Photo |
|---------------------------------------------------------------------------------------------|-----------------------------|-------|
| Parging cement is present on<br>pipe fittings (elbows, valves,<br>tees, hangers etc.)       | Chrysotile/Friable          |       |
| Sweatwrap insulation (brown<br>layered paper), is present on<br>straight sections of pipes. | None                        |       |

| Material and Application                                                                                                                                                                                                                                                                                                                         | Asbestos<br>Type/Friability       | Photo |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|-------|
| Remaining pipes are either<br>uninsulated or insulated with<br>non-asbestos fibreglass or<br>elastomeric insulation<br>(Armaflex).                                                                                                                                                                                                               | None                              |       |
| Ducts are either uninsulated or<br>insulated with non-asbestos<br>fibreglass (foil-faced or<br>canvas).                                                                                                                                                                                                                                          | None                              |       |
| Mechanical equipment is either<br>uninsulated or insulated with<br>non-asbestos fibreglass.                                                                                                                                                                                                                                                      | None                              |       |
| All ceiling tiles are determined<br>to be non-asbestos based on<br>previous sampling, the material<br>(gypsum) or presumed to be<br>non-asbestos based on the<br>date of manufacture<br>determined from the date<br>stamp applied to the top of the<br>tiles or the age of the materials<br>determined from the age of the<br>building addition. | None                              |       |
| Textured plaster is present as a soffit finish.                                                                                                                                                                                                                                                                                                  | Chrysotile/Potentially<br>Friable |       |
| Smooth plaster present on walls and ceilings does not contain asbestos.                                                                                                                                                                                                                                                                          | None                              |       |
| Non-asbestos drywall joint compound is present on wall and ceiling finishes.                                                                                                                                                                                                                                                                     | None                              |       |

| Material and Application                                                                                                                                                                                                                                                        | Asbestos<br>Type/Friability                                          | Photo |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|-------|
| Asbestos in drywall joint<br>compound was banned in<br>Canada in 1980. Drywall joint<br>compound in the 2005 addition<br>was installed after 1986 (1980<br>plus a reasonable non-<br>compliance period based on<br>our experience) and is<br>assumed to contain no<br>asbestos. | None                                                                 |       |

| Material and Application                                                                                                                                                                                                     | Asbestos<br>Type/Friability                                        | Photo |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|-------|
| Destructive testing was<br>conducted in exterior masonry<br>block walls, including creating<br>penetrations at 6 locations.<br>The locations of destructive<br>testing have been indicated on<br>the drawings in Appendix I. | Loose fill vermiculite<br>was not observed<br>within the cavities. |       |

Additional notes on the drywall joint compound discussed above:

Drywall (gypsum board) and drywall joint compound is present as a wall and ceiling finish in the
original section of the building. As per the methodology, drywall joint compound is sampled at
exterior walls, columns or other locations that are unlikely to have been renovated in an attempt
to determine the presence of asbestos in the original drywall compound. A total of 3 samples of
drywall joint compound were collected (samples S0003A-C, lab reference no. 71919978) and it
was found that all samples do not contain asbestos. Therefore, drywall joint compound present
on drywall finishes should be considered to be non-asbestos.

### 3.0 RECOMMENDATIONS

### 3.1 General

Perform a detailed intrusive assessment prior to building renovation or demolition operations. The assessment should include; destructive testing (i.e. coring and/or removal of building finishes and components), sampling of other hazardous materials (lead, mercury, PCBs, mould, etc.), and materials not tested in this study (i.e. excluded asbestos materials).

### 3.2 Remedial Work

There is no remedial work recommended.

### 3.3 On-going Management and Maintenance

The following recommendations are made regarding on-going management and maintenance work involving the asbestos materials identified.

### 3.3.1 Asbestos

Maintain the Asbestos Management Program (AMP).

Perform a reassessment of asbestos materials on an annual basis.

Remove asbestos-containing materials (ACM) prior to alteration or maintenance work if ACM may be disturbed by the work. Follow appropriate asbestos precautions for the classification of work being performed.

Sample presumed ACM prior to alteration or maintenance work if the presumed ACM may be disturbed by the work.

Update the asbestos inventory report upon completion of any abatement and removal of asbestoscontaining materials.

### 4.0 TERMS AND LIMITATIONS

This work was performed subject to the Terms and Limitations presented or referenced in the proposal for this project.

Information provided by Pinchin is intended for Client use only. Pinchin will not provide results or information to any party unless disclosure by Pinchin is required by law. Any use by a third party of reports or documents authored by Pinchin or any reliance by a third party on or decisions made by a third party based on the findings described in said documents, is the sole responsibility of such third parties. Pinchin accepts no responsibility for damages suffered by any third party as a result of decisions made or actions conducted. No other warranties are implied or expressed.

### 5.0 REFERENCES

The following legislation and documents were referenced in completing the assessment and this report:

- Asbestos on Construction Projects and in Buildings and Repair Operations, Ontario Regulation 278/05.

Disclaimer: Due to the nature of the EPA 600 method, asbestos may not be detected in samples containing low levels of asbestos. We strongly recommend that analysis of floor tiles, vermiculite, and/or heterogeneous soil samples be conducted by TEM for confirmation of "None Detected" by PLM. This report relates only to the samples tested and may not be reproduced, except in full, without the written approval of SAI. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government. Analytical uncertainty available upon request. Scientific Analytical Institute participates in the NVLAP Proficiency Testing program. Unless otherwise noted blank sample correction was not performed. Estimated MDL is 0.1%.

Disclaimer: Due to the nature of the EPA 600 method, asbestos may not be detected in samples containing low levels of asbestos. We strongly recommend that analysis of floor tiles, vermiculite, and/or heterogeneous soil samples be conducted by TEM for confirmation of "None Detected" by PLM. This report relates only to the samples tested and may not be reproduced, except in full, without the written approval of SAI. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government. Analytical uncertainty available upon request. Scientific Analytical Institute participates in the NVLAP Proficiency Testing program. Unless otherwise noted blank sample correction was not performed. Estimated MDL is 0.1%.

| Analyst(s):        | K. Cockburn              | # Samples submitted:      | 6                      |
|                    |                          | # Phases analyzed:        | 7                      |

### Method of Analysis:

### EPA 600/R-93/116 - Method for the Determination of Asbestos in Bulk Building Materials dated July, 1993

Bulk samples are checked visually and scanned under a stereomicroscope. Slides are prepared and observed under a Polarized Light Microscope (PLM) at magnifications of 40X, 100X or 400X as appropriate. Asbestos fibres are identified by a combination of morphology, colour, refractive index, extinction, sign of elongation, birefringence and dispersion staining colours. A visual estimate is made of the percentage of asbestos present. A reported concentration of less than (<) the regulatory threshold (see chart below) indicates the presence of confirmed asbestos in trace quantities, limited to only a few fibres or fibre bundles in an entire sample. This method complies with provincial regulatory requirements where applicable. Multiple phases within a sample are analyzed and reported separately.

All bulk samples submitted to this laboratory for asbestos analysis are retained for a minimum of three months. Samples may be retrieved, upon request, for re-examination at any time during that period.

The Pinchin Ltd. Mississauga asbestos laboratory is accredited by the National Institute of Standards and Technology, National Voluntary Laboratory Accreditation Program (NVLAP Lab Code 101270-0) for the 'EPA – 40 CFR Appendix E to Subpart E of Part 763, Interim Method of the Determination of Asbestos in Bulk Insulation Samples,' and the 'EPA 600/R-93/116: Method for the Determination of Asbestos in Bulk Building Materials'; and meets all requirements of ISO/IEC 17025:2005.

This report relates only to the items tested.

NOTE: This test report may not be reproduced, except in full, without the written approval of the laboratory. The client may not use this report to claim product endorsement by NVLAP or any agency of the U.S. Government. This report is valid only when signed in blue ink by the analyst. Vinyl asbestos floor tiles contain very fine fibres of asbestos and may be missed by some laboratories using the PLM method. Internal verification studies performed by Pinchin indicate that the chance of missing asbestos in floor tiles is no higher than about 2%. The vinyl tile study and laboratory documentation on measurement uncertainty is available upon request. The analysis of dust samples by PLM cannot be used as an indicator of past or present airborne asbestos fibre levels.

Disclaimer: Due to the nature of the EPA 600 method, asbestos may not be detected in samples containing low levels of asbestos. We strongly recommend that analysis of floor tiles, vermiculite, and/or heterogeneous soil samples be conducted by TEM for confirmation of "None Detected" by PLM. This report relates only to the samples tested and may not be reproduced, except in full, without the written approval of SAI. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government. Analytical uncertainty available upon request. Scientific Analytical Institute participates in the NVLAP Proficiency Testing program. Unless otherwise noted blank sample correction was not performed. Estimated MDL is 0.1%.

Disclaimer: Due to the nature of the EPA 600 method, asbestos may not be detected in samples containing low levels of asbestos. We strongly recommend that analysis of floor tiles, vermiculite, and/or heterogeneous soil samples be conducted by TEM for confirmation of "None Detected" by PLM. This report relates only to the samples tested and may not be reproduced, except in full, without the written approval of SAI. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government. Analytical uncertainty available upon request. Scientific Analytical Institute participates in the NVLAP Proficiency Testing program. Unless otherwise noted blank sample correction was not performed. Estimated MDL is 0.1%.

Disclaimer: Due to the nature of the EPA 600 method, asbestos may not be detected in samples containing low levels of asbestos. We strongly recommend that analysis of floor tiles, vermiculite, and/or heterogeneous soil samples be conducted by TEM for confirmation of "None Detected" by PLM. This report relates only to the samples tested and may not be reproduced, except in full, without the written approval of SAI. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government. Analytical uncertainty available upon request. Scientific Analytical Institute participates in the NVLAP Proficiency Testing program. Unless otherwise noted blank sample correction was not performed. Estimated MDL is 0.1%.

#### HAZARDOUS MATERIALS SUMMARY / SAMPLE LOG

# Legend:

- Sample number S#### Asbestos sample collected
- L#### Paint sample collected
- P#### PCB sample collected
- M#### Mould sample collected
- V#### Material visually similar to numbered sample collected
- V0000 Known non Hazardous Material
- V9000 Material is visually identified as Hazardous Material
- V9500 Material is presumed to be Hazardous Material
- [Loc. Abated Material No.]

- Units
- SF Square feet LF Linear feet
- EA Each
- % Percentage

- NF Non Friable material.
- F Friable material
- PF Potentially Friable material

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Unit    Good

Fair

Poor

No visible damage or deterioration

- А Accessible to all building occupants
- в Accessible to maintenance and operations staff without a ladder
- Accessible to maintenance and operations staff with a ladder. Also rarely entered, С locked areas
- D Not normally accessible

#### Visible

- The material is visible when standing on the floor of the room, without the removal or Υ opening of other building components (e.g. ceiling tiles or access panels).
  - The material is not visible to view when standing on the floor of the room and requires
- the removal of a building component (e.g. ceilings tiles or access panels) to view and Ν access. Includes rarely entered crawlspaces, attic spaces, etc. Observations will be limited to the extent visible from the access points.

#### Colour Coding

The material is known to contain regulated concentrations of asbestos; either by analytical results or visible identification (use of the V9000 code). The material is presumed to contain asbestos; based on visual appearances; typically a material known to historically contain asbestos; however, not sampled due to limited access or the destructive nature of the sampling.

#### Action

- (1) Clean u Precaut (4) Poor Co
- (7) Management program and surveillance

- Yes erosion (e.g. duct for heating or cooling blowing directly on or across an ACM). This or No field is only completed where Air Plenum consideration is required by regulation.
- Air Plenum The material is in a return air plenum or in a direct airstream or there is evidence of air

Minor, repairable damage, cracking, delamination or deterioration

Irreparable damage or deterioration with exposed and missing material
